

## Logistics by Norske Skog Golbey: our vision

### Automation at the service of the quality of the reels and the safety of our employees

Since 2014, twelve automatically-guided vehicles manage the handling of the reels in our warehouse. The automation of the warehouse (investment required: around € 5 million) has many advantages for our customers and employees:

- increased safety for our operators.
- no damages due to the handling of the reels - quality is guaranteed.
- controlled and uninterrupted flows - and therefore reduced costs on the medium term.

### Norfibre Logistics: understand your needs and meet your requests

In 2015, we partnered with two local transport companies to create Norfibre Logistics. Its mission is to manage our upstream and downstream flows, thus offering our customers the assurance of finding the most suitable solution according to their location, in terms of efficiency and cost.

While the road transport market suffers from a shortage of drivers in general, Norfibre Logistics ensures the availability of the trains and trucks needed by Norske Skog Golbey for the daily shipment of 2500 tons of paper.

### Reduction of our carbon footprint and promotion of the circular economy

For years we have been developing alternative inbound and outbound logistics solutions in order to reduce our carbon footprint:

- 95% of the trucks used comply with the Euro 6 standard, which imposes the most stringent thresholds regarding the emissions into the air.
- rail transport represents 35% of our transport solutions.
- since January, we have been using gas-powered trucks to supply recovered paper from the Rhône-Alpes region. A solution rarely used for long-distance journeys.
- in order to limit the road traffic, we are developing new virtuous transport loops in partnership with other manufacturers (delivery of finished products from our partners on one way and supply of our raw materials on the back way).

## Focus on the logistics team in Golbey

Thirteen people are in charge of sending your orders, managing the rail and road activities, the stocks and the shipments. Our logistics team work in close collaboration with our sales offices, the logistics companies and our planning team to collect and meet your needs while taking into account the production constraints.

*"Based on your requests, the availability of the reels and the constraints of the carriers, we establish a daily loading schedule. On average, we ship 14 railcars and 65 trucks per day", Christine - Logistics Assistant*

*"Our goal is the customer satisfaction. Our mission is to implement all the means necessary to deliver the finished product within the required time", Laurence - Logistics Assistant*

In 2015, the logistics team won the Progress Gold Trophy at the ATIP Congress for their work on "Managing Shipping and Distribution Business"
